

# Financial Narrative Summarisation

## Report - Team - 11

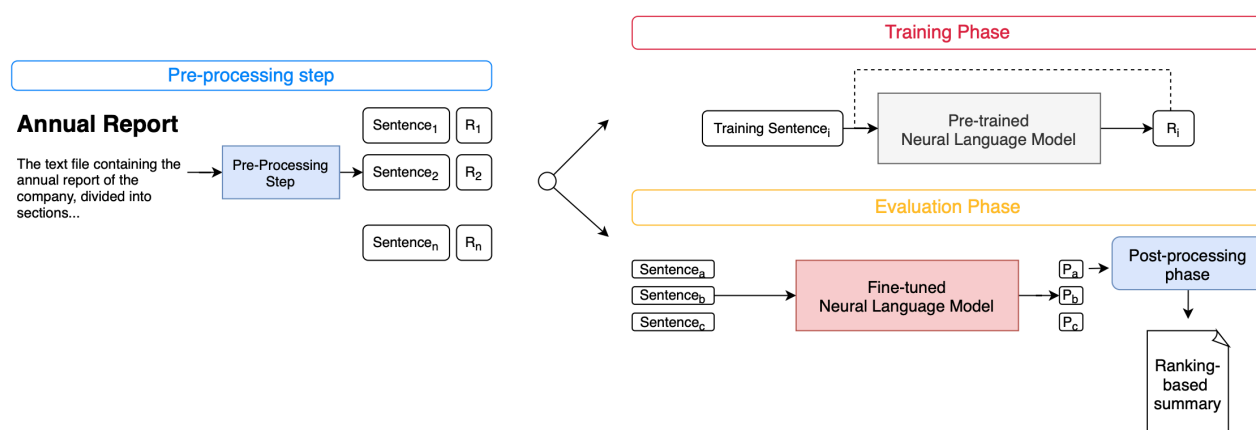

### Introduction

- Companies produce a variety of reports containing both narrative and numerical information at various times during their financial year, including annual financial reports.
- This creates a vast financial information environment which can be impossible to keep track of.
- This shows the vital need for automatic summarisers to reduce the time and effort of both the shareholders and investors.

### Problem Statement

To create a specialised annotated dataset for supervised learning and use the annotated dataset for the fine-tuning of a BERT model, focusing on a regression task for performing extractive text summarisation of financial data.
